                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                    vector. The vector comprises a heterologous nucleotide sequence encoding B-domain deleted factor VIII operably linked with at least one enhancer and at least one promoter. The method results in the production of high titer rAAV vector stocks carrying the B-domain deleted factor VIII transgenes and expression cassettes, which generate adequate titers of virus for in vivo administration. The recombinant vectors are useful for treating haemophilia A, where the liver expresses the encoded B-domain deleted factor VIII, which is secreted into the blood. They are also useful for the treatment of other coagulation disorders. The present sequence encodes a B-domain deleted factor VIII.

```
The invention relates to a method for expanding the population of CC endothelial cells (EC) obtained from peripheral blood, by culturing, CC in contact with a collagen I coated surface, buffy coat cells obtained CC from peripheral mammalian blood in the presence of a culture medium CC containing vascular endothelial growth factor (VEGF) and free of bovine brain extract. EC are useful for treating hemophilia by introducing it CC into the blood stream of a mammal, so that an effective amount of CC fractor VIII protein is secreted in the blood stream of the mammal. CC This sequence represents the vector HSQReNeo where the human factor CC VIII gene into which an enhanced green fluorescent protein coding CC sequence (HSQ) has been inserted, is subcloned. Transgenic EC transduced in vitro are useful for improving prosthetic implants. EC is also useful for diagnosing clotting disorders where indication or disease is CC associated with a reduction in the activity of an enzyme. EC is also useful in gene therapy for treating the variety of diseases including adenosine deaminase deficiency, stokle cell anemia, thalassemia, hemophilia, diabetes, alpha-antitrypsin deficiency, brain disorders such as alzheimer's disease, heart diseases, defects in immune system, for remaining home fractivities and to treat or remaining the content of the cell and the immune system, for remaining home fractivities and to treat or remaining the content of the content of

It was obtd. by PCR amplification (see also AAT69812-13) of the HCII acidic region from total liver CDNA, fusion to sequences encoding Factor VII aa706-711 and aa737-743, and incorporation of the construct into plasmid pCLB-dB695. The hybrid protein, which can be expressed using gene therapy techniques, has increased proceagulant activity owing to the HCII acidic region, and can be used to treat blood coagulation disorders such as haemophilia A.

Human factor VIII beta-domain deleted SQN deletion cDNA sequence

06-AUG-1998

(first entry)

```
CC intravenously to a human The long term systemic expression results in a CC measurable level of the therapeutic protein being produced in the blood CC of the human for a period of at least 30 days after the administration of CC the RRV vector preparation. RRV's can be used for in vivo delivery of CC thrombosis, hypercoagulable disorders, liver diseases such as hepatitis, CC disorders such as thalassemia, phenylketonuria, Lesch-Nyhan syndrome, CC exerce combined immunodeficiency (SCID), cystic fibrosis, Duchenne's CC diabetes, hypopituitarism, adenine deamlnase deficiency, Juherited emphysema, familial hypercholesterolemia, CC diabetes, hypopituitarism, adenine deamlnase deficiency, alpha1-CC antitrypsin deficiency, Guacher's syndrome, anaemia, infections such as CC inflammatory disease or graft versus host disease, RRV's are capable of Surviving inactivation in human serum thereby allowing efficient gene CC transfer over prolonged periods of time.

                                                                                                                                                                                                                                                                                                                                                                                                                                                             expressing a therapeutic protein. The RRV preparation is resistant to degradation by human complement and is capable of inducing long term systemic expression of the therapeutic protein when administered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This cDNA encodes the beta-domain deleted SQN deletion protein of human factor VIII. This is used in the construction of recombinant retroviral vectors expressing human factor VIII. The invention provides the preparation of replication defective recombinant retrovirus (RRV)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             pactor VIII, the SQN deletion does not influence the in vivo pharmacokinetics, but the reduced size of the molecule appears to decrease proteolytic degradation. The invention relates to preparations of replication defective recombinant retrovirus (RV) expressing a B domain-deleted human Factor VIII protein, where the recombinant RV is capable of infecting human cells, is resistant to degradation by human complement and is capable of inducing long-term (at least 30 days and up to 6 months or longer post-injection) systemic expression of Factor VIII when administered to a haemoghilia A patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This DNA sequence includes a coding region for the B domain deletion mutant SQN (see AAW44372) of human Factor VIII. The SQN mutant is created by fusing Ser-143 to Gln-1638 of native Factor VIII (see AAW44373) to form a Ser-Gln-Asn (SQN) link between the A2 vIII (see AAW44373) to form a Ser-Gln-Asn (SQN) link between the A2 and A3 Factor VIII domains. When compared to plasmid-derived and A3 Factor VIII domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 6; Page 174-175; 236pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          transduce cells either in vivo or ex vivo. Factor-VIII expressed from such transduced cells will be processed and transported in a fashion analagous to the expression product of a normal Factor-VIII gene. Retroviral particles harbouring such vectors will be useful in the gene therapy of haemophilia A.
                                                                                                                                                                                                                                       A full-length cDNA clone (AAT31031) codes for human Factor-VIII (AAW00465), a trace plasma glycoprotein which acts as a cofactor in conjunction with Factor-IXa in the activation of Factor-X. Retroviral vectors comprising the full-length cDNA can be efficiently
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  30-DEC-1994;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         972 acttgaattcaggcctcattggagcccta 1000

PT Factor VIII mutants having increased half-life useful for treating PT hemophilia, comprise one or more amino acid substitutions in the A2 XX Claim 41; Page 86-101; 121pp; English.

CC amino acid substitution at one or more positions in the A2 domain and/or an CC amino acid substitution at one or more positions in the C2 domain.

CC amino acid substitution at one or more positions in the C2 domain.

CC amino acid substitution at one or more positions in the C2 domain.

CC amino acid substitution at one or more positions in the C2 domain.

CC amino acid substitution at one or more positions in the C2 domain.

CC amino acid substitution at one or more positions in the C2 domain mutants which lacks a B domain (AB48842). The factor VIII mutants have an increased half-life CC in the bloodstream. The A2 domain mutants exhibit reduced LRP-dependent (receptor approach of factor VIII, while C2 domain mutants to a method of using RAP (receptor associated protein), a protein mutants have related protein), a protein which in the related ligand internalisation, to increase the half-life of factor VIII. The mutant CC internalisation, to increase the half-life of factor VIII. The mutant for treating haemophilia, RAP, LRP-binding RAP mutants or fragments, and nucleotides encoding them, are useful nucleotides encoding them, are useful the invention. The invention provides means of increasing the half-life of factor VIII protein or DNA of the invention. The invention provides means of increasing the half-life of factor VIII protein or DNA of the invention provides means of increasing the half-life of factor VIII.

                                                                                                                                                                                                                                                                     The gene encodes human factor VIII. The factor VII is produced in pure form and in useful amts. using recombinant DNA technology. Factor VIII can be used to correct factor VIII deficient plasma, and activates factor X to Xa in the presence of factor IXa, can and phospholipid. These to activities are inactivated by antibodies specific for factor VIII. The activity of the prod. is bound to an immobilised monoclonal antibody specific for factor VIII. Factor VIII activity is activated by thrombin. The activity is bound to, and can be eluted from, immobilised von Willebrand factor. Dose of factor VIII is 20-40 units/kg over 8 hours i.v. for maintenance therapy for haemophilia, 40 units/kg for preoperative conditions, or 15-20 units/kg for minor haemorrhaging.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human factor VIII gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC Known binding sites at the N-terminus and within the C2 domain.

CC Haemophilia A is frequently caused by an intron 22 inversion in the C2 decoming inverted and localised telomeric to two sections, exons 1.22 becoming inverted and localised telomeric to the original site, while C2 exons 23-26 remain isolated at the original site. Exons 23-26 a portion on functional. The factor VIII gene product of individuals with this C2 mutation thus comprises domains, without which factor VIII is CC mutation thus comprises domains A1-A2-B-A3 plus a fragment of C1, which C3 invention relates to a novel method for for treating haemophilia A in a mammal able to produce the factor VIII heavy chain. The method comprises CC light chain, or a gene encoding it, and may be useful for treating cC light chain, or a gene encoding it, and may be useful for treating CC invertion well-characterised starting materials which therefore CC derived from well-characterised starting materials which therefore creduces the risk of pathogenic infection which was previously a problem CC is also a need of providing factor VIII activity to patients who CC factor VIII.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches 605;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents cDNA encoding the full-length human factor VIII. In this form, the protein is 300 kD in size with the domain structure Al-A2-B-A3-C1-C2. However, prior to secretion, this 300 kD protein is proteolysed into a heavy chain (Al-A2-B, with continued proteolysis within the B domain resulting in molecules of varying length) and a light chain (A3-C1-C2) that remains non-covalently attached to the heavy chain. Upon secretion, factor VIII is rapidly cleared from the circulation unless it is bound by the plasma protein von Willebrand Factor (VWF). Factor VIII binds to VWF through the light chain, with

glycerophosphorylserine,

binding is detected. A potential ligand is selected as a potential drug on the basis of its binding to the ligand binding domain of factor VIII with a similar affinity to a standard ligand, such as preferably in conjunction with computer modelling. The potential ligand is contacted with the ligand binding domain of factor VIII and the

phosphate or sulphate.

The method is useful for

                                                                                                                                                    The present sequence was used in an example illustrating an invention relating to a crystal of protein-ligand complex, which comprises an N-terminal truncated factor VIII and a ligand. The crystal diffracts X-rays to determine the atomic coordinates of the protein-ligand complex to a resolution of more than 5.0 Angstrom. The N-terminal truncated factor VIII retains the C2 domain of, and lacks at least 2000 amino acids from the flexible N-terminus of, the full-length factor VIII. The crystal is useful in drug screening assays. The method comprises selecting a potential ligand by performing structure-based drug design with a three-dimensional structure determined for the crystal in continuation with a continuation with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               identifying candidate drugs that inhibit coagulation. The N-terminal truncated factor VIII is also useful for identifying and analysing mutant variants of the C2 domain of factor VIII that can be incorporated into full-length factor VIII. The variants are useful for treating haemophiliac patients to display reduced or altered immune responses to treatments with factor VIII.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 9029 BP; 2860 A; 1910 C; 1848 G; 2411 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cells, is resistant to degradation by human complement and is capable of inducing long-term (at least 30 days and up to 6 months or longer post-injection) systemic expression of Factor VIII when administered to a haemophilia A patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (see AAW44373). The invention relates to preparations of replication defective recombinant retrovirus (RV) expressing a B domain-deleted human Factor VIII protein, such as the SQN deletion mutant (see AAW44372), where the recombinant RV is capable of infecting human AAW44372).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                P-PSDB; AAW44373

The sequence tag present in the cDNA between the NotI site and the
oligo-dT track served to identify it as a clone from the normalized
adult Ovary library. cDNA Library Preparation: M. Fatima Bonaldo,
Ph.D. Clone distribution: clones will be available through Research
Genetics This clone is also available through the I.M.A.G.E.
Consortium at LLNL (info@image.llnl.gov). IMAGE ID-1767329
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         University of Towa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /lab_host="DH10B (Life Technologies)"
/note="Vector: pT773D-Pac (Pharmacia) with a modified
polylinker; Site_I: Not I; Site_2: Eco RI; This library
consists of a mixture of individually tagged normalized
libraries constructed from rat placenta, adult lung, brain
, liver, kidney, heart, spleen, ovary, and muscle. The tag
is a string of 3-5 nucleotides present between the Not I
site and the oligo-dT track which allows identification of
the library of origin of a clone within the mixture."
